**DETAILED ACTION**

***Allowable Subject Matter***

Claims 1-26 are allowed.

The following is an examiner's statement of reasons for allowance: The amended claims feature a computer system with a plurality of processing resources, with which are associated one or more power supplies, which supply power to the processing resources. There also exists a resource management engine that comprises at least one dynamic table listing historical demand data for the system. The resource management engine predicts a decreased demand requirement for the processing resources for a time period based on the historical demand data of the system, and in response to the decreased demand requirement, the engine chooses between lowering the power state of a processing resource and turning off the processing resource for the first time period. This choosing is based on at least whether the demand requirement is predicted to increase in the future. Because the selection of whether to lower the power state versus turning off the resource takes place in response to a prediction as to whether the power demand increases in the future, it is believed that the claimed invention is novel. The examiner was unable to procure prior teachings of such features as claimed by the amended claims, and could not render said features obvious to one of ordinary skill in the art, without the use of impermissible hindsight constructions. Additionally, Applicant's remarks regarding the claim amendments and the provided prior art references' deficiencies are persuasive, in that none of the references taken singly, or in combination, teaches the newly claimed features. It is therefore the examiner's belief that the claimed invention does indeed possess novelty.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee, and to avoid processing delays, should preferably accompany the issue fee. Such submissions should clearly be labeled "Comments on Statement of Reasons for Allowance."
